

Mission Critical Government Video Solutions

Legend:

- 1 Stream live SD and HD cable and satellite TV channels to every PC and TV set, both locally and to every remote bureau.
- 2 Encode and distribute locally produced live content in high quality h.264, including video of town hall meetings, press conferences and local or federal government committees. Record any such content for future on-demand access to employees over your local IP network and to the general public over the Internet.
- 3 Make every piece of archival footage, from employee training materials to senate hearings, available on demand or for streaming at scheduled intervals.
- 4 Connect portable encoders to cameras spread throughout a wide area and distribute these feeds to multiple agencies at once. The footage can then be used for mission critical applications including quick response and assistance, civil order support and traffic monitoring. Footage can be recorded at any time or non-stop for post-event assessment.
- 5 Share all live and on-demand content between local and remote bureaus as well as with other agencies throughout the city, state or the entire nation.

Notes:
